## ARM provides the microcontroller solution

BY BERNARD KEIL

### CONTENTS

### Cortex-M3: right processor, right time

The new generation of ARM in Cambridge seems to have come up with an article winner with the Cortex-M3 processor core. Not only are they being licensed, such as STMicroelectronics, Renesas, TI and most recently Atmel, developing low-power silicon based on the 32-bit Cortex-M3 core, but the really interesting thing is that the core is also defining a whole new class of ultra-low power microcontrollers. This puts it on the same sentence with RISC1 and x86, but there is a difference. These competitors use Cortex-M0 to create new types of energy-efficient MCUs and will see the light in the next few years. For some time now, Luminary Micro has based its business around designing and selling low-power microcontrollers on the ARM Cortex-M0 core. And now the Luminary Micro's Stellaris MCU family we will soon be able to add the name EnergyMC3. This is the name of the low-power MCU being developed by Energy Micro of Ohio.

### ARM Makes Major Upgrades To Cortex-M3

ED News Staff | ED Online ID #181737 | April 15, 2008

Article Rating Not Rated

In its latest release of the Cortex-M3 processor, ARM has included a new Wake-Up Interrupt Controller (WIC) that allows almost instantaneous return to fully active

## ARM Cortex-M3 license - be silly not to!

Is there any limit to the number of traditional microcontroller suppliers ready to license ARM's Cortex-M3 low-power 32-bit microcontroller family, based on the ARM Cortex-M3 processor, in the second quarter of 2008?

## ARM M3 core opens way for green micros

By Steve Bush  
steve.bush@electronsonline.com

A second firm has started up to exploit the 32-bit ARM Cortex-M3 processor.

Oslo-based Energy Micro follows Texan firm Luminary Micro, with the Norwegian firm promising low power designs. Energy Micro is planning to introduce its first 'ultra low-power' microcontroller family, dubbed EnergeiC, in the second quarter of 2008.

are commonly known, some them a renew and unique.

In addition to Lumini Micro making a range of microcontrollers, NXP, TI Toshiba are also using core in controllers.

Is there room for another vendor? "When we select the core architecture it was a very important criteria for us to use an architecture that is supported by several MCU vendors," said Førre. "Software development constitutes a

ARM extends Cortex-M3 to low power apps

John Walko  
E.E. TIMES EUROPE  
04/14/2008 5:11 PM

LONDON — ARM plc has extended its Cortex-M3 processor range to make it more accessible for ultra low-power embedded applications, cost-sensitive devices and safety-critical designs.

The latest release includes a Wake-Up Interrupt (WIC) controller that allows almost instantaneous return to fully active mode from an Ultra-Low Leakage (ULL) retention state and introduces enhanced power management features that address the increasing need in the embedded market for extra performance and longer battery life.

# Cortex-A8 & Atom: Power and Area

- Lots of hype and FUD in press

**EETIMES**

Go ahead, prove us wrong

“...we examined why ARM would likely win out over Intel for mobile processors...”

Patrick Mannion, US

**The New York Times**

Intel's Dominance Is Challenged by a Low-Power Upstart

“...each new computing generation has displaced its predecessor by reaching a broader audience and costing far less...”

John Markoff, US

- Atom is more competitive than other Intel CPUs
  - Still a long way behind ARM solutions in power and area (cost)

Feature	S5PC100 Advantages Over Atom
Solution	Single chip, lower integration costs
Avg. Power	25% of the power
Chip Size	25% of the size (PoP Available)
Video Playback	3x+ longer time
Standby time	20x+ longer with IEM & DVFS

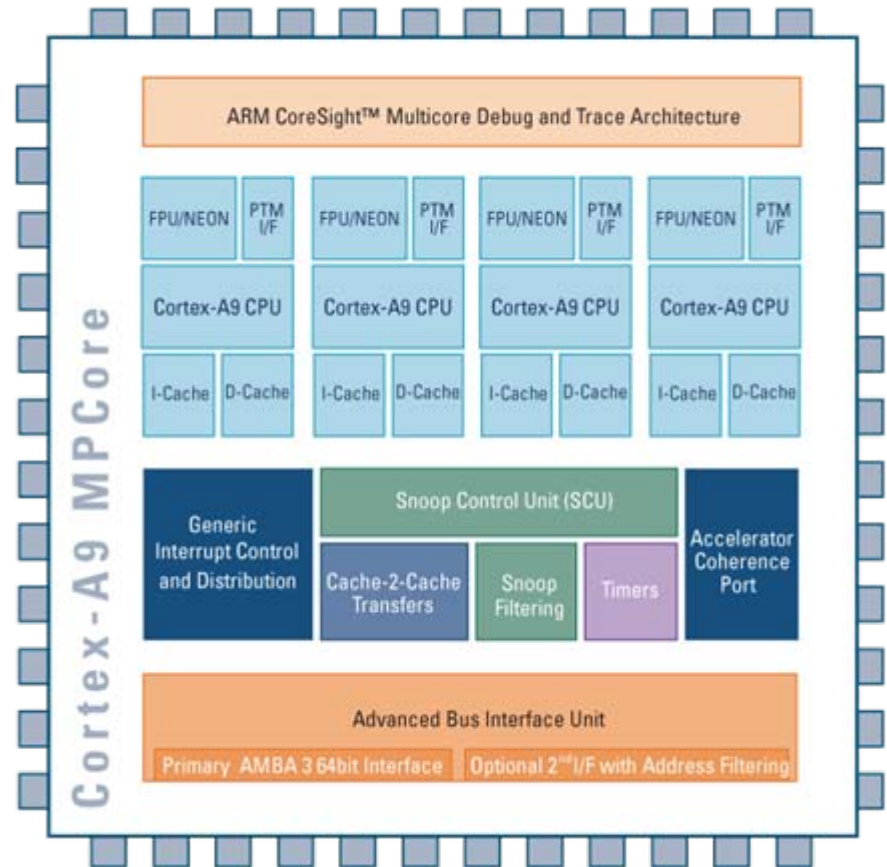

Source: Samsung

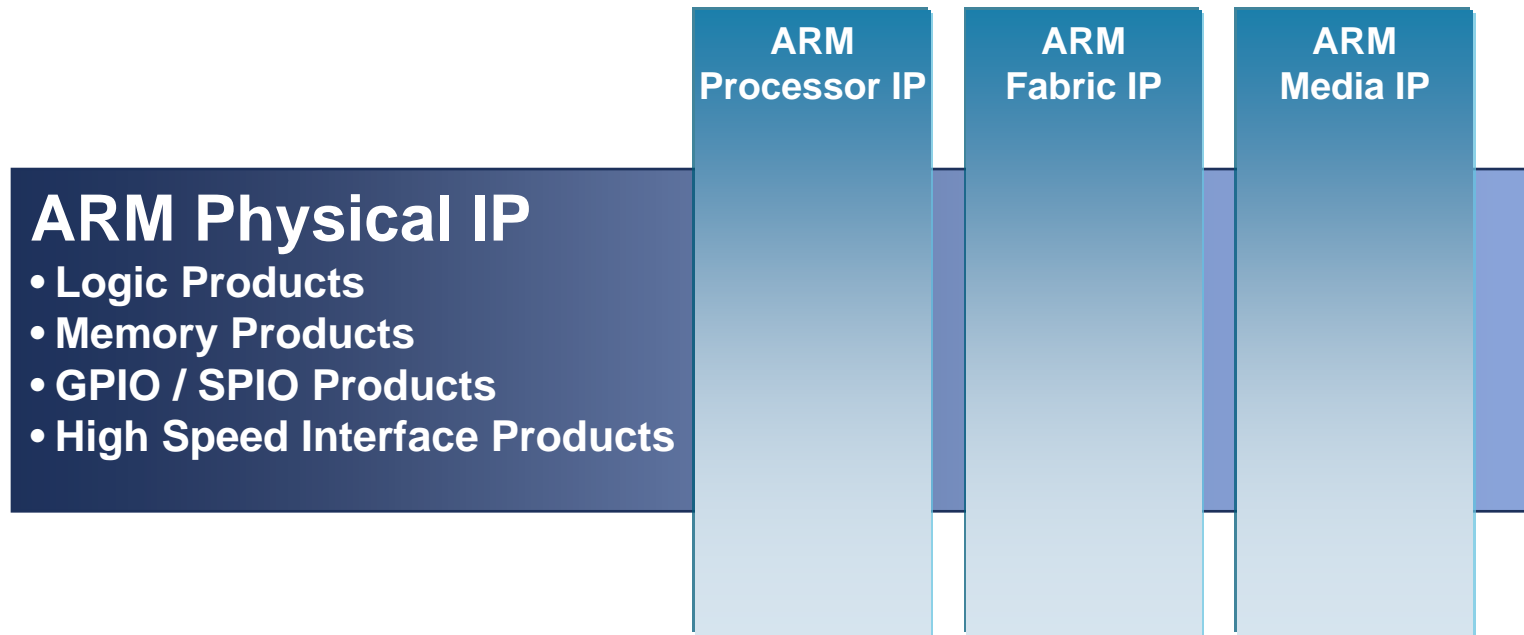

# Cortex-A9 – Technology Leadership

- Breakthrough performance and power scalability
  - Second generation 1-4X SMP technology
  - Advanced pipeline with 2.5 DMIPS/MHz
  - Optional floating-point and NEON units
- New system-level integration features for design optimisation
  - Accelerator coherency port
  - Generic interrupt control (GIC) and distribution system
- Suitable for high-end enterprise through to wireless handsets

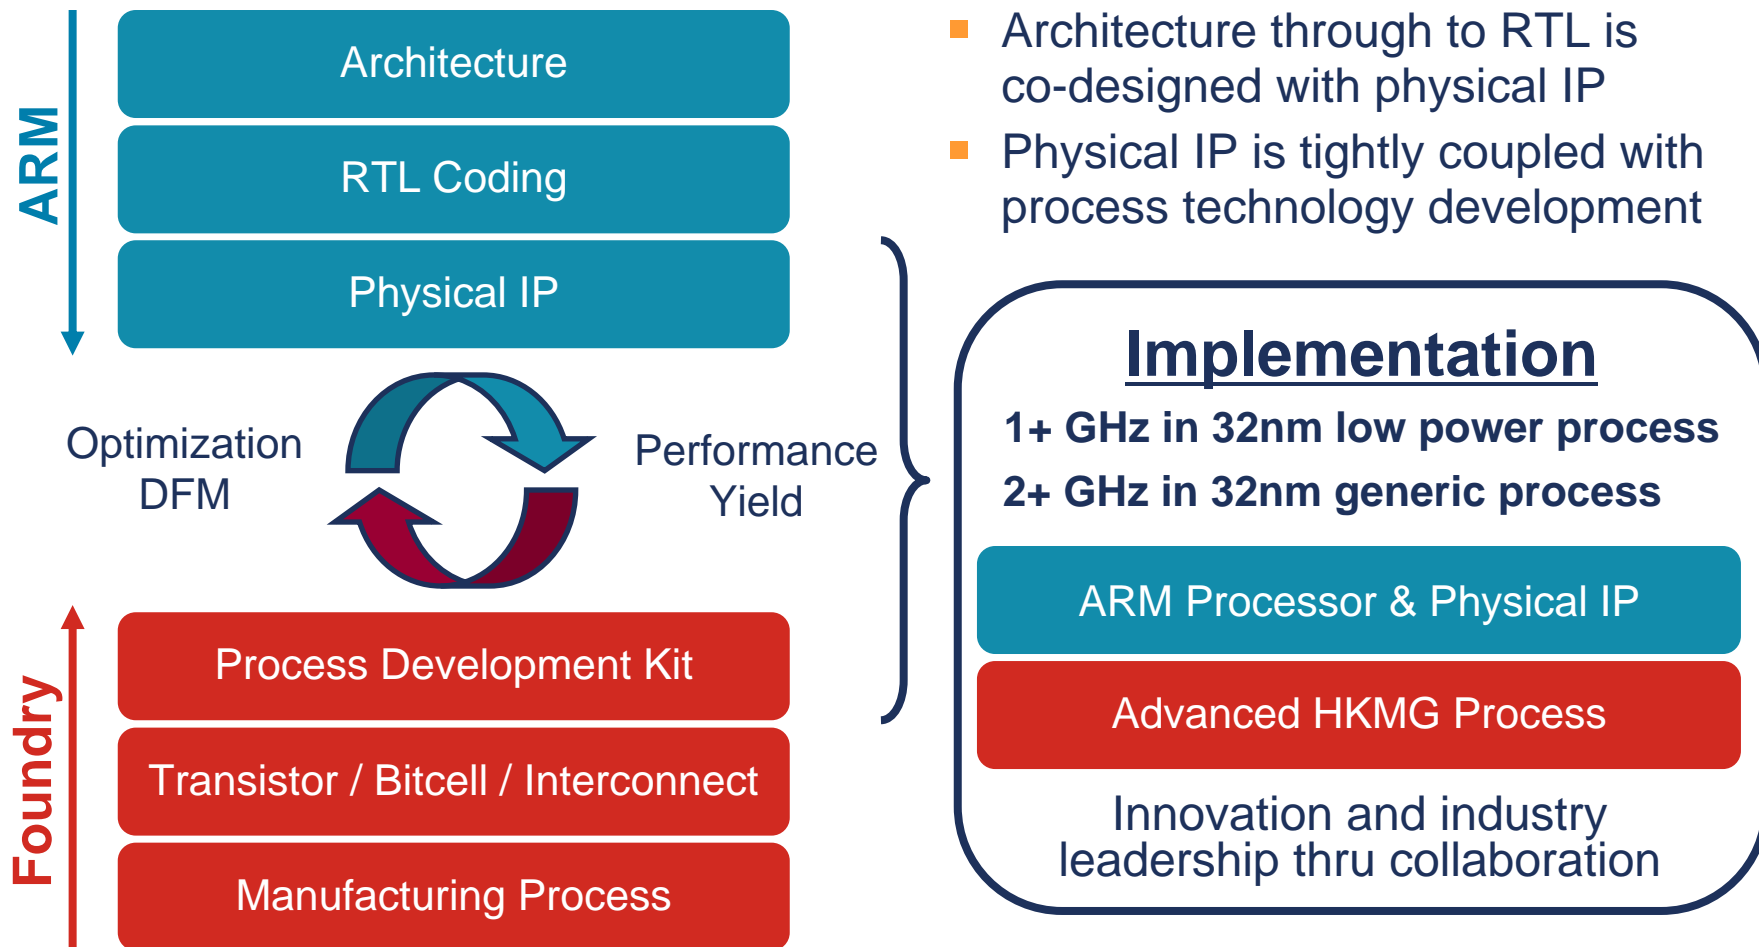

# ARM Physical IP Offers Best Implementation

- ARM offers rich Physical IP solutions for all products
  - Enables SoC “Processor to Pads” solutions
- Key Focus Areas:
  - Assure Physical IP are optimized for ARM core implementations
  - Achieve Leadership Power, Performance and Area (PPA)
  - Deliver earliest-possible availability of optimized Physical for new cores

# Leading Implementation Needs Partnership

- ARM IP on advanced foundry process uses integrated design

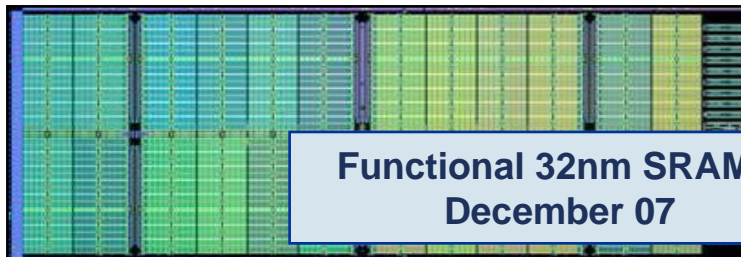

# High- $\kappa$ Metal Gate Technology at 32nm

- First HKMG at 32nm – Innovation to re-enable scaling

Metal gate replaces the polysilicon-based electrode in the traditional stack

Hafnium-based high-k material replaces SiO<sub>2</sub> for enhanced leakage and scaling

Functional 32nm SRAM –

Rob Aitken, ARM Fellow

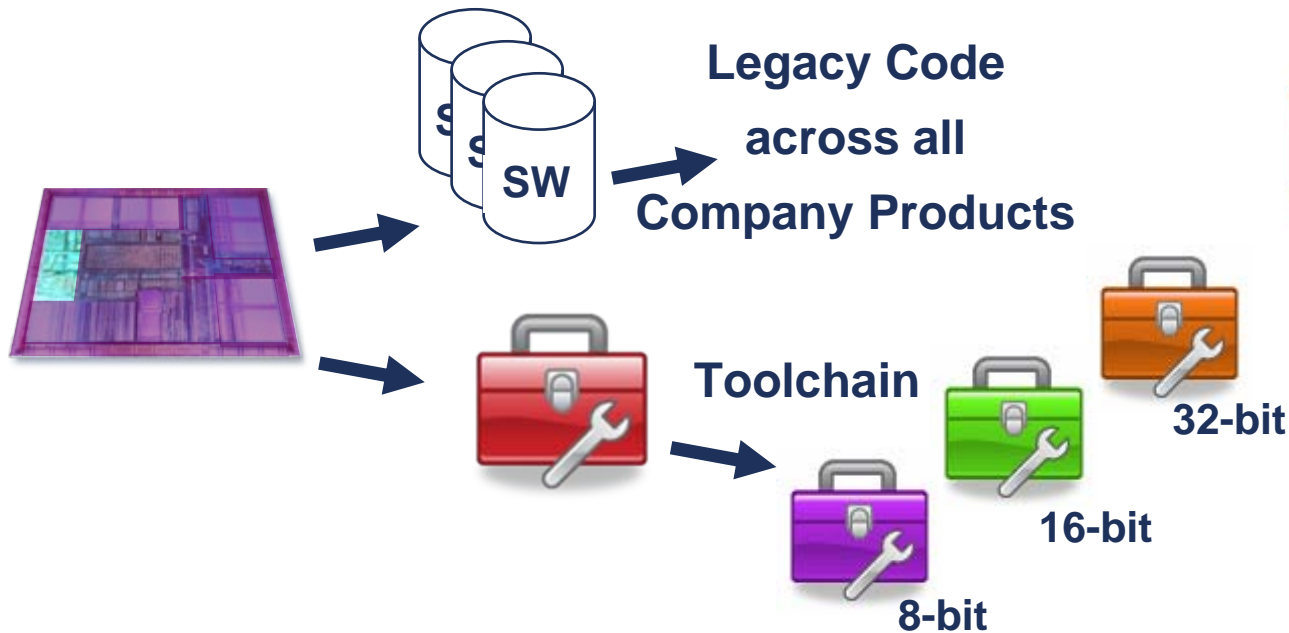

# MCU Standards

Wayne Lyons

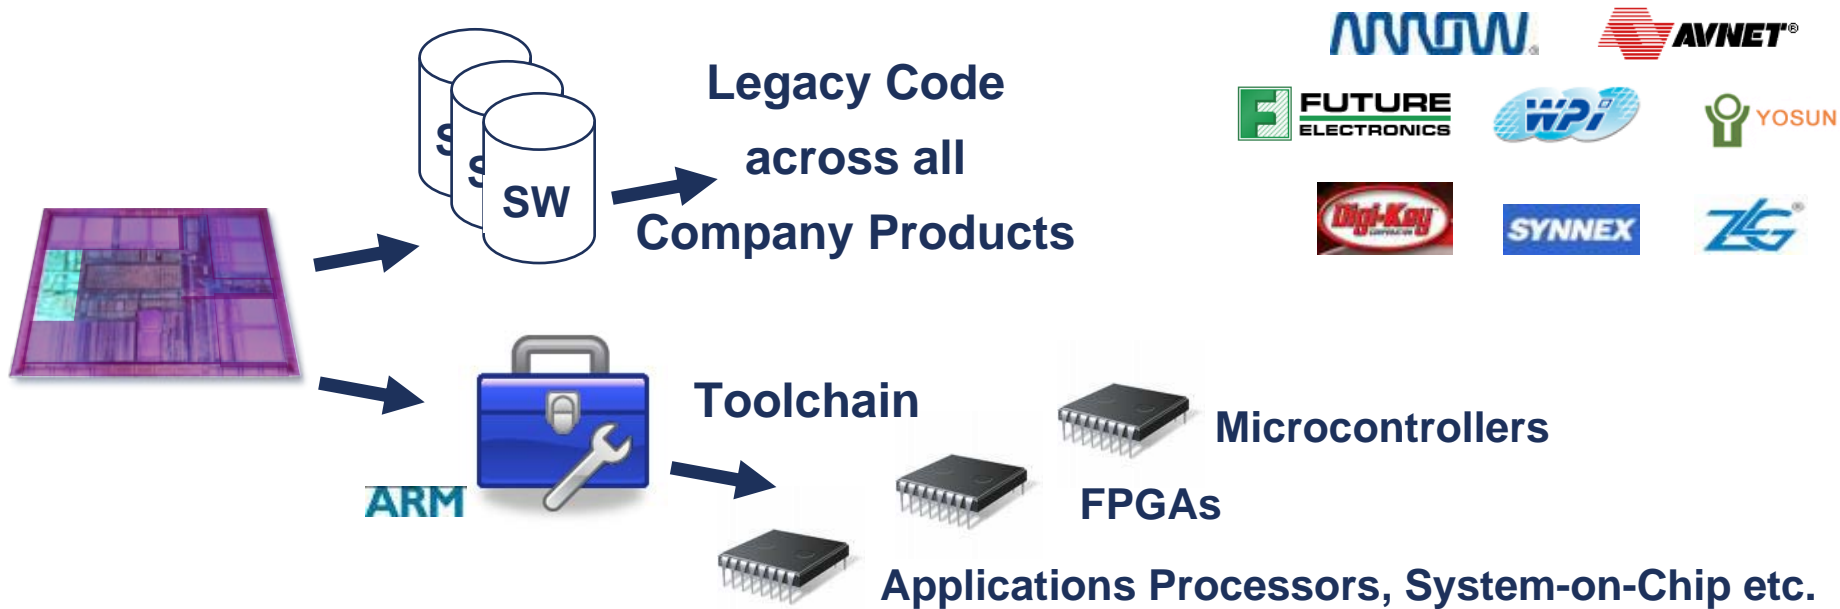

# Why Care About the CPU?

Fragmentation in the 8-bit MCU market  
(By Revenue - Gartner 2006)

- Traditional MCU market very fragmented
- Many vendors have multiple architectures which are incompatible
- Incompatible architectures across organization reduces engineer efficiency
- For each additional toolchain: IT costs increase and reliability reduces
- A consistent CPU architecture enables software and toolchain reuse

# ARM Strategy in MCU

- Enabling a standard platform for embedded development
  - Protecting investment in software design
  - Forget traditional 8/16/32-bit perceptions, think of it as a 'Software Engine'
  - Enable reuse, not just from MCU to MCU but onto other digital solutions

# ARM Cortex-M Profile Availability

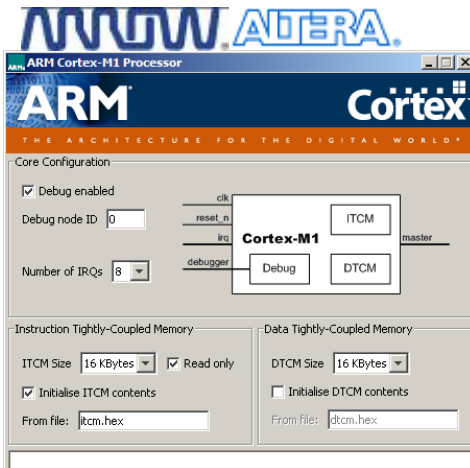

## TOSHIBA

LUMINARY  
MICRO™ Stellaris®

More than 20 licensees of Cortex-M3 processor  
More than 150 Cortex-M3 processor-based devices

## Actel

## SoftConsole

...Plus several recent announcements

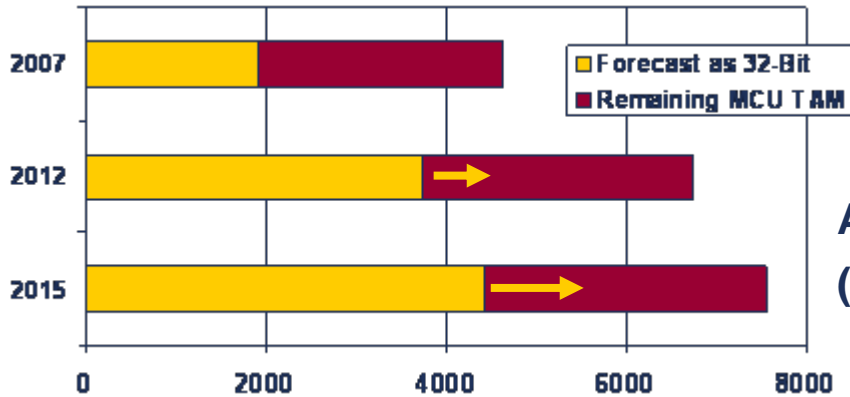

# Market Opportunity in Industrial MCU

- Strong growth forecast for ARM technology-based MCU over the next five years
- Growth opportunities in secure applications, power an energy
- Leading indicators such as 2x sales increase of RealView MDK from '06 to '07

Source: SemiCast 2008

# Breaking 32-bit Boundaries in Auto

TAM for companies that introduce products with compelling mix of Peripherals, Memory Integration and Support

Automotive (\$M)

Demonstrated by diverse product split forecast for 32-bit in automotive by 2015

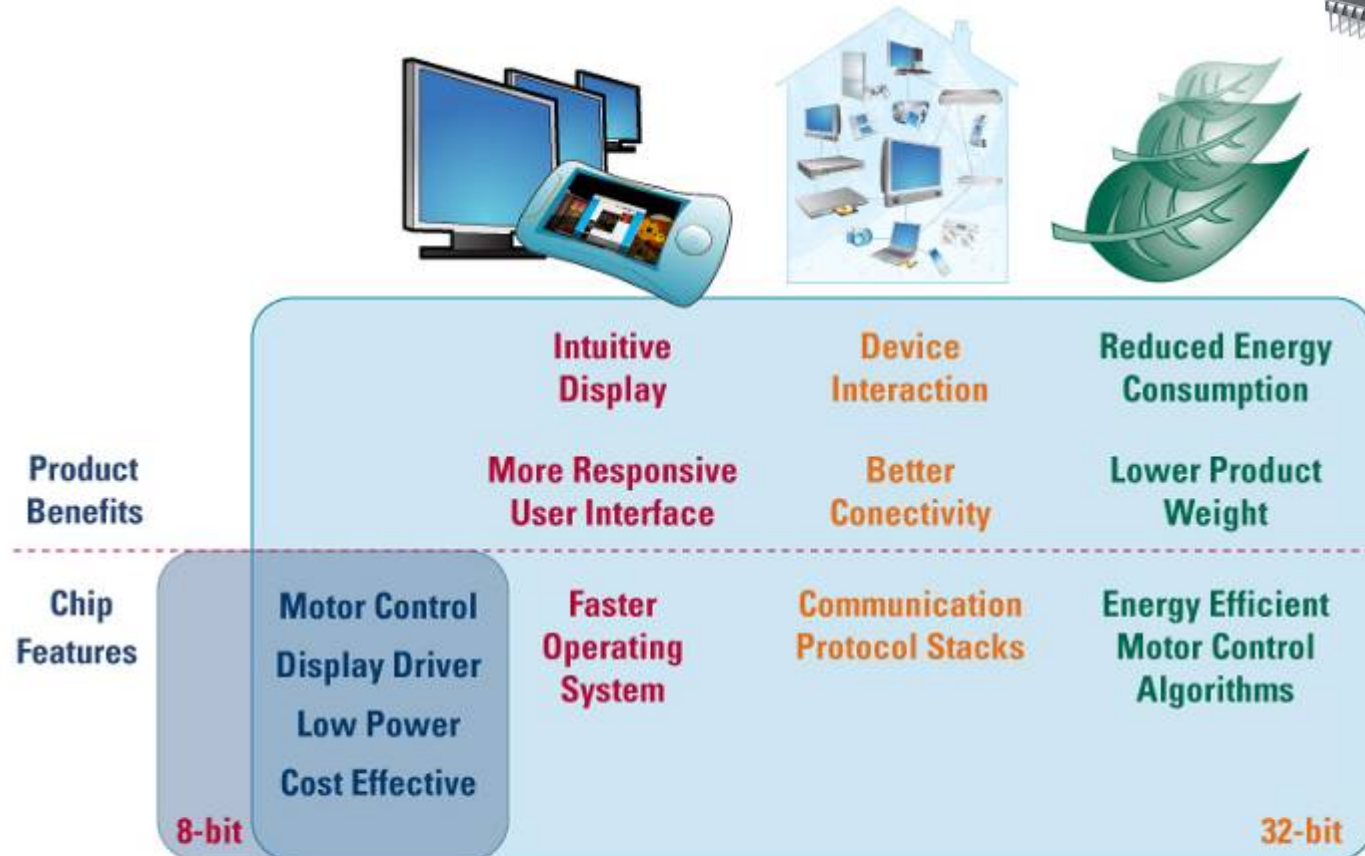

Sources: Gartner & Strategy Analytics 2008

# Focus on Software in Embedded MCU

- What can “32-bit” really mean to the end customer

Silicon advances have enabled low power, cost-effective 32-bit Microcontrollers but what truly differentiates these new products is their capability to run more powerful software

# Standards Enable Software Reuse

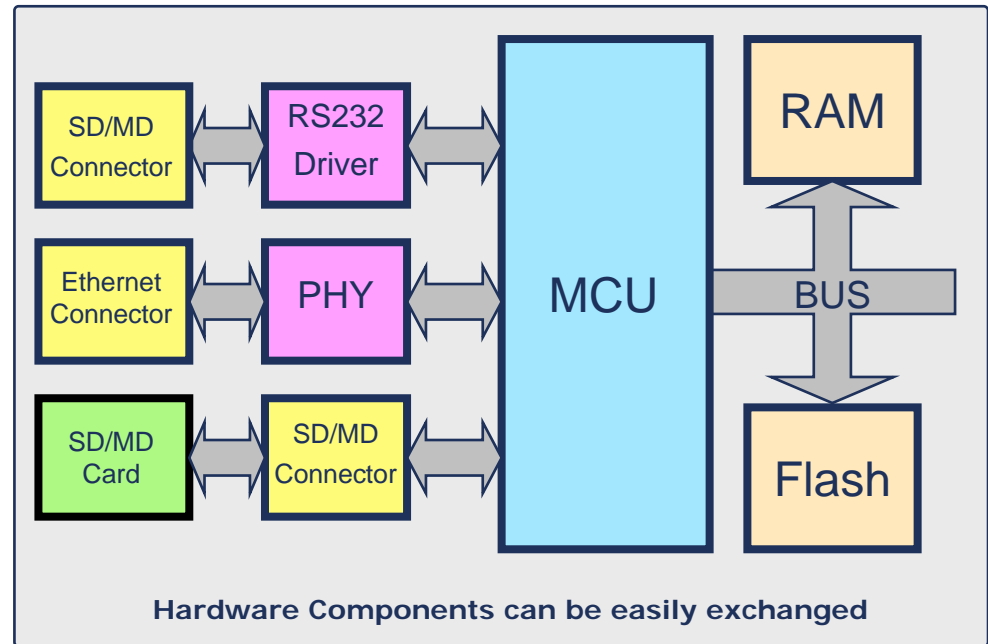

- Increasing number of software stacks and protocols already available on ARM technology-based industrial microcontrollers
- Industrial market reusing existing standards when possible to leverage development and software expertise
- Middleware availability and reuse becoming increasingly important
- ARM Application Binary Interface (ABI) for Compiler interoperability
  - Allows middleware reuse across Compiler platforms
  - Allows software to be archived then reused on future platforms

Application-specific protocols	
WS-Discovery	WS-Eventing
WS-Security WS-Policy WS-MetadataExchange WS-Transfer WS-Addressing	
SOAP 1.2 WSDL 1.1, XML Schema	
UDP	HTTP 1.1
	TCP
IPv4/IPv6	

**The DPWS  
Protocol Stack**

# Software Driver Complexity : The Challenge

- Well-known issues that drive software costs
  - Increasing product requirements that are implemented by software
  - Hardware inefficiencies often compensated by software work-arounds
- Software components are incompatible and cannot be re-used.

Software standards are key for the future
